Professional Summary

Cloud Software Engineer with 5+ years of experience delivering software solutions in Agile environments using AWS, Python, Go, Terraform, Kubernetes, and modern cloud platforms. AWS Certified Solutions Architect – Professional with hands-on experience in Infrastructure as Code, cloud modernization, Generative AI, AWS Bedrock, and Retrieval-Augmented Generation (RAG) architectures.

Certifications

AWS Certified Solutions Architect – Professional • AWS Certified Developer – Associate • AWS Certified SysOps Administrator – Associate • AWS Certified Cloud Practitioner • AWS Certified AI Practitioner • HashiCorp Terraform Associate • Microsoft Azure Fundamentals (AZ-900)

Technical Skills

Programming: Python (Primary), Go (Primary), Java, SQL, JavaScript

Cloud: AWS (Primary), Azure

Infrastructure: Terraform, HCP Terraform, Kubernetes, Helm, Docker, Linux, CI/CD, Git

AI/ML: AWS Bedrock, RAG, AI Agents, ChromaDB, Amazon Titan Embeddings, Vector Databases

Databases: Aurora PostgreSQL, PostgreSQL, DynamoDB

Professional Experience

Atos (Cloudreach) | Nov 2021 – Present

Software Engineer Consultant

Software Engineer Consultant delivering cloud engineering, platform engineering, Infrastructure as Code, Kubernetes, software development, database modernization, and AI-powered automation solutions for enterprise clients including Blackstone, The Options Clearing Corporation (OCC), Capital One, and Mayo Clinic.

Selected Client Engagements

Atos Client: Blackstone | Jan 2022 – Apr 2023

- Supported migration from Terraform Enterprise to HCP Terraform as part of Blackstone's Platform Engineering team.
- Imported existing AWS infrastructure and HCP Terraform users, teams, and platform resources into Terraform-managed Infrastructure as Code using Terraform imports and Git-based workflows.
- Developed Python-based AWS Lambda functions integrating with the HCP Terraform API to automate workspace lifecycle operations, including creating, retrieving, listing, and deleting HCP Terraform workspaces through a React-based self-service platform.

- Provisioned AWS infrastructure across development, test, and production environments using standardized Terraform module templates and account-specific configurations.
- Optimized legacy automation workflows, reducing execution time from 15 minutes to 1 minute while supporting production operations.

Atos Client: The Options Clearing Corporation (OCC) | Jun 2023 – Jun 2024

- Developed and maintained automated testing solutions for enterprise applications, including Java-based Cucumber test frameworks and Python integration and unit tests.
- Managed monthly application deployments across multiple Kubernetes environments using Rancher and Helm.
- Investigated and resolved production issues through application log analysis, container troubleshooting, and Kubernetes diagnostics using Rancher, kubectl, and Docker.
- Supported Kubernetes platform initiatives including cluster provisioning, cluster migrations, and application modernization efforts within a critical financial services environment.

Atos Client: Capital One | Nov 2024 – Jun 2025

- Led the first successful migration of Aurora PostgreSQL Global Clusters across development, test, and production environments from a legacy internal Infrastructure as Code framework to a new company-standard platform.
- Planned and executed PostgreSQL major version upgrades, including multi-stage upgrade paths required to satisfy AWS Aurora PostgreSQL version constraints.
- Coordinated production database migrations through formal change management processes while collaborating with application teams and database stakeholders.
- Validated Infrastructure as Code configurations for multi-region Aurora PostgreSQL deployments, ensuring successful migration without unnecessary resource recreation or service disruption.
- Audited Go package dependencies, remediated technical debt, and developed unit tests for Go-based services.

Atos Client: Mayo Clinic | Mar 2026 – May 2026

- Developed a new React-based user interface and application enhancements for a healthcare platform.
- Implemented Azure App Registration authentication and identity integration to support secure user access.
- Worked with GCP services including BigQuery, Pub/Sub, and Artifact Registry to support cloud-native application development.
- Resolved Azure DevOps CI/CD pipeline issues and remediated application security vulnerabilities, including dependency-related security findings.

Internal Innovation Initiative – AI Driven Incident Response Platform

- Collaborated within a three-person team to build an AI-driven incident response platform using AWS Bedrock, Lambda, Step Functions, EventBridge, DynamoDB, ServiceNow, Slack, and CloudWatch.
- Automated incident investigation workflows and generated AI-powered summaries, remediation recommendations, rollback plans, and validation procedures.
- Implemented integrations with AWS DevOps Agent capabilities and operational tooling.
- Reduced incident investigation effort from over 60 minutes to approximately 15 minutes through automation and AI-assisted analysis.

Projects

RAG Application

- Developed a Retrieval-Augmented Generation application using AWS Bedrock, Amazon Titan Embeddings, ChromaDB, and Python.
- Implemented document chunking, embedding generation, semantic search, and retrieval workflows using Tesla earnings transcripts as the knowledge source.
- Built an end-to-end proof of concept demonstrating modern AI engineering concepts including vector databases and grounded LLM responses.

Previous Experience

Kapsch TrafficCom – Staff System Engineer | Nov 2015 – Nov 2021

- Developed Java applications supporting traffic management systems and automation tooling.

Logical Systems Inc. – Control System Engineer | Jan 2012 – Jun 2015

- Developed and supported industrial automation and control system solutions.

Education

Bachelor of Science in Mechatronics Engineering – Southern Polytechnic State University
