Professional Summary

Cloud Software Engineer with 5+ years of experience delivering enterprise software solutions using AWS, Python, Go, Terraform, Kubernetes, and modern cloud platforms. AWS Certified Solutions Architect – Professional with hands-on experience in Infrastructure as Code, cloud modernization, Generative AI, AWS Bedrock, LangChain, LangGraph, AI Agents, and Retrieval-Augmented Generation (RAG) architectures.

Certifications

AWS Certified Solutions Architect – Professional • AWS Certified Developer – Associate • AWS Certified SysOps Administrator – Associate • AWS Certified Cloud Practitioner • AWS Certified AI Practitioner • HashiCorp Terraform Associate • Microsoft Azure Fundamentals (AZ-900)

Technical Skills

Programming: Python (Primary), Go (Primary), Java, JavaScript, GraphQL, SQL

Cloud: AWS (Primary), Azure, GCP

Infrastructure: Terraform, HCP Terraform, Kubernetes, Helm, Docker, Linux, CI/CD, Git

AI/ML: AWS Bedrock, LangChain, LangGraph, AI Agents, Retrieval-Augmented Generation (RAG), ChromaDB, Amazon Titan Embeddings, Semantic Search, Prompt Engineering, Vector Databases

Databases: Aurora PostgreSQL, PostgreSQL, DynamoDB

Professional Experience

Atos (Cloudreach) | Nov 2021 – Present

Software Engineer Consultant delivering cloud engineering, platform engineering, Infrastructure as Code, Kubernetes, software development, database modernization, and AI-powered automation solutions for enterprise clients including Blackstone, OCC, Capital One, and Mayo Clinic.

Blackstone | Jan 2022 – Apr 2023

- Supported migration from Terraform Enterprise to HCP Terraform as part of the Platform Engineering team.
- Imported AWS infrastructure, HCP Terraform users, teams, and platform resources into Terraform-managed Infrastructure as Code.
- Developed Python AWS Lambda functions integrating with the HCP Terraform API to automate workspace lifecycle operations through a React-based self-service platform.

- Provisioned AWS infrastructure across development, test, and production using standardized Terraform modules.
- Optimized legacy automation workflows from 15 minutes to 1 minute.

The Options Clearing Corporation | Jun 2023 – Jun 2024

- Developed Java Cucumber test frameworks and Python integration/unit tests.
- Managed monthly Kubernetes deployments using Rancher and Helm.
- Investigated production issues using Rancher, kubectl, Docker, and application logs.
- Supported Kubernetes platform initiatives including cluster provisioning, migrations, and modernization.

Capital One | Nov 2024 – Jun 2025

- Led the first successful migration of Aurora PostgreSQL Global Clusters from a legacy Infrastructure as Code platform.
- Planned PostgreSQL major version upgrades, including multi-stage upgrade paths required by Aurora PostgreSQL.
- Coordinated production database migrations through formal change management.
- Validated Terraform configurations for multi-region Aurora PostgreSQL deployments.
- Audited Go dependencies, remediated technical debt, and developed Go unit tests.

Mayo Clinic | Mar 2026 – May 2026

- Developed React application enhancements for a healthcare platform.
- Implemented Azure App Registration authentication.
- Worked with BigQuery, Pub/Sub, and Artifact Registry.
- Resolved Azure DevOps CI/CD pipeline issues and remediated security vulnerabilities.
- Leveraged Cursor AI to accelerate React development while maintaining code quality.

Internal Innovation Initiative – AI Driven Incident Response Platform

- Collaborated within a three-person team to build an AI-driven incident response platform using AWS Bedrock, Lambda, Step Functions, EventBridge, DynamoDB, ServiceNow, Slack, and CloudWatch.
- Automated incident investigation workflows and generated AI-powered summaries, remediation recommendations, rollback plans, and validation procedures.
- Implemented integrations with AWS DevOps Agent capabilities.
- Reduced incident investigation effort from over 60 minutes to approximately 15 minutes.

Projects

AI Agent-Powered RAG Platform

- Designed and developed an AI agent-powered Retrieval-Augmented Generation (RAG) application using Python, AWS Bedrock, LangChain, LangGraph, ChromaDB, and Amazon Titan Embeddings.
- Built a document ingestion pipeline using LangChain to load PDF documents, perform intelligent text chunking, generate semantic embeddings, and store vectors in ChromaDB.

- Implemented AI agent workflows with LangGraph to orchestrate retrieval, prompt construction, and LLM interactions.
- Integrated Amazon Bedrock foundation models to generate context-aware responses using Tesla earnings transcripts.
- Implemented an end-to-end AI workflow demonstrating AI agents, semantic search, vector databases, prompt engineering, and grounded LLM responses.

Previous Experience

- Kapsch TrafficCom – Staff System Engineer (2015–2021): Developed Java applications supporting traffic management systems and automation tooling.
- Logical Systems Inc. – Control System Engineer (2012–2015): Developed industrial automation and control system solutions.

Education

Bachelor of Science in Mechatronics Engineering – Southern Polytechnic State University
